## Please Share this with your Healthcare Providers

If you wish we would like you to invite your physician to learn about the advances in stem cells.

We recognize that it is a challenge to keep up with all the advances in medicine but stem cells are special.

This is the only treatment that allows your body to determine how and where to make new cells.

Stem cell therapies are already playing a significant role in the treatment of many illnesses.

As often the case due to strict regulations and powerful health care companies America lags the world in stem cell therapies. Lives are being saved, the blind see, the crippled walk and the patients with heart, lung,

kidney and nerve diseases can alter the course of their suffering with a simple therapy the lasts for years and impacts their lives NOW!

We currently use the most advanced stem cells - Amniotic stem cells - derived from a process approved by the FDA in a FDA licensed lab in Scottsdale, AZ.

This company is licensed to sell these stem cells globally. Amniotic stem cells are immune privileged which means that our bodies do not recognize them as foreign and therefore do not reject them.

There has never been any side effects reported from administering amniotic stem cells.

Please review the following links and encourage those you love as well as your physicians to do the same in an effort to help you make the best decisions regarding your care. We also encourage you to create a 'Google alert' with the topic of 'adult stem cells' and track the advances daily as we have done for the past five years. This is one of the most exciting advances in medicine since the discovery of antibiotics !

[www.StemCell.life](http://www.StemCell.life) is our web site with a direct link to our Facebook page where you will find many testimonials and answers to common questions. It is also a place where you can ask other patients who have preceded you in these powerful treatments.

We welcome your questions, we discuss stem cell therapies daily with physicians from all over the world. We recognize that stem cell therapies are not for everyone and welcome learning from others in our efforts to help patients. We have a diverse team of healthcare professionals; physicians, dentists, pharmacists, chiropractors, naturopaths, and therapists from all over the world.
